3) 🛛 Informa	ation Disclosure Statement(s) (PTO-1449 or F No(s)/Mail Date		5) Notice of Informal P 6) Other:	Patent Application (PTO-152)				

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2. Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for a detector device, does not reasonably provide enablement for a transceiver. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims. The specification only teaches photodetectors. A transceiver has both a transmitter and a receiver. It is unclear how there is a transceiver and/or transceiver channels if there is no transmitter.
- 3. The disclosure is objected to because of the following informalities:
 a preliminary examination of this application reveals that it includes terminology which is
 so different from that which is generally accepted in the art to which this invention
 pertains that a proper search of the prior art cannot be made. For example: the
 specification discloses and claims a transceiver and transceiver channels. A
 transceiver has a transmitter and a receiver. The specification only discloses a
 receiver (no transmitter). It also discloses transceiver channels-yet it is unclear how
 they can be transceiver channels when there is no transmitter. It would appear that
 they are only receiver channels and a receiver array.

Applicant is required to provide a clarification of these matters or correlation with art-accepted terminology so that a proper comparison with the prior art can be made.

Applicant should be careful not to introduce any new matter into the disclosure (i.e.,

Application/Control Number: 09/995,108 Page 3

Art Unit: 2633

matter which is not supported by the disclosure as originally filed). Appropriate correction is required.

4. No art has been used since it is unclear how the elements of the claimed subject matter are connected since the elements are all related to the transceiver channels and there do not appear to be transceiver channels. The examiner has trouble ascertaining what the invention really is since there are no transmitter signals and no way to provide transmitted signals in the transceiver channels.

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kho teaches test pads and power pads in a detector array in column 8, lines 53-56. Spinner teaches an uncoupling capacitor in a detector device.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie Pascal whose telephone number is 571-272-3032. The examiner can normally be reached on Monday, Friday 6:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on 571-272-3022. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
